

Building a future skilled talent pipeline

What We Do.... We have been designed with one goal in mind: to help students plan their futures. By connecting students with hands-on work-based learning experiences. PIM helps students apply their academic and technical skills in the real world of work while also developing essential workplace skills critical to their future employment success.

Connecting the dots...

Within a community, we partner with economic development, chambers, and workforce development organizations to connect with local employers to inspire growth of a future talent pipeline.

To be specific, we want to understand the employer's industry and needs, then connect with the local schools and their programs of study that are training the skills to support that specific industry.

Our ask...

First, we want to provide a free account to organizations to be listed within the community database.

Second, consider working with us to develop a WBL opportunity for local students and other candidates to acquire on the job learning. Development and posting of these experiences are at no cost.

Schools try to provide work-based learning (WBL) experiences for students. However, it can be hard for some schools to provide enough WBL opportunities for all industries. Pathways in Motion's mission is to help develop these opportunities.

How do we do it...

We use a platform called **RecruitMe**. This easy to use platform connects a community by posting the regions data on available resources such as WBL opportunities, news, and events offered by the local employers, nonprofit organizations, and schools.

This platform provides over 30 different types of WBL opportunities that can be developed, posted, and managed by Pathways in Motion.

Plain and simple, on-the job learning experiences work!

Communities, Employers, Schools, and Nonprofit Organizations can build custom recruiting pages that...

- **Communicate their employment future needs**
- **View a video job board with current openings**
- **Post opportunities for work-based learning (WBL) events**
- **Post “Career Videos” to showcase a career pathway**
- **Contribute to curriculum ensuring education looks and feels like the job**
- **Employer branding on what they do with recruiting videos**

We are asking for your help as a sponsor for WBL opportunities and sign-up today.

Everett Grady, board member PIM
